UNIPATH CLASS SAMPLE · FICTIONAL · NOT A REAL STUDENT

Portfolio: Ploy, Grade 11

- I started coding in Grade 8 with Scratch, and now I write small games in Python with the pygame library.
- At our school game jam I led a team of three.
- We made a puzzle game about saving water, and I designed every level on paper before we built it.
- I drew all the pixel art characters myself and made a poster to explain the controls to younger players.
- I also run the computer club on Fridays, where I show members how to test their code and fix bugs.
- Next, I want to learn how studios plan bigger games and how players' feedback changes a design.
