UNIPATH CLASS SAMPLE · FICTIONAL · NOT A REAL STUDENT

Portfolio: Krit, Grade 12

- For two years I have measured water quality in the canal behind our school for the science club.
- Every month we test pH and oxygen, then I enter the data in a spreadsheet and draw graphs.
- Last year our experiment on plastic waste won second place at the provincial science fair.
- I volunteer with a mangrove planting group and helped design a recycling station at school.
- I would like to study how cities can protect rivers while they grow.
